

Claims

- 1. A method of inhibiting the growth of cancer cells comprising exposing cancerous cells to a therapeutically effective amount of a composition which comprises at least one interferon and a retinoid, wherein said retinoid is associated with lipid carrier particles.
 - 2. The method of Claim 1 wherein the retinoid is retinoic acid.
- 3. The method of Claim 2 wherein the retinoic acid is all-trans retinoic acid.
- 4. The method of Claim 3 wherein lipid carrier particles comprise all-trans retinoic acid, lipid, and a triglyceride and the molar ratio of retinoid to lipid is at least about 15:85, where the triglyceride is at least about 15% by weight of the composition, and where the composition is stable in an aqueous environment.
- 5. The method of Claim 1 comprising administering said retinoid composition in doses administered over a period of at least one-half hour.
- 6. The method of Claim 1 comprising administering said retinoid composition at a frequency of about every other day or less frequent.

F.M. The method of Claim 1 wherein the cancer is a renal cancer.

A method of inhibiting the growth of cancer cells comprising exposing cancerous cells to a therapeutically effective amount of a composition which comprises at least one interferon and further

co-timely exposing of said cancerous cells to a therapeutically effective amount of a retinoid, wherein said retinoid is associated with lipid

John 20

carrier particles.

A. A therapeutic treatment kit for the treatment of cancer comprising interferon, retinoid and instructional materials for the combined use of said retinoid and interferon.
